

Prisma ORM

npm → node package executed

data source → DB

↳ mongodb

User $\xrightarrow{\text{posts}}$ Posts

one to many relation

```
model User {  
  id String @id @default(auto()) @map("_id") @db.ObjectId  
  posts Post[]  
}
```

id for user ←

↳ It auto generates Id.

↳ maps to the Id in mongodb

```
model Post {  
  id String @id @default(auto()) @map("_id") @db.ObjectId  
}
```

↳ id for posts

Author Id of Post
references id of User.

author User @relation (fields: [authorId]
references: [id])

authorId String @db.ObjectID

npm install -g prisma

npm install @prisma/client

npm prisma init

for the schema.prisma file

In Schema.prisma change dbSource to
required. Now describe the models.

Db: Postgres/SQL Mongo

prisma generate

prisma Client generated.
